

1 Gang FOB switch for Kinetic Receiver

SKU Code: WS1036

1 Gang FOB switch, push button, on/off/dimmable Black colour. Wireless key fob switch is portable and very easy to use.

Features

1. The ENER-J wireless key fob switch is portable and very easy to use. It has a built-in micro energy generator - when the switch is pressed the kinetic system transforms the movement into energy. This transmits a signal to the receiver to turn the lamp or other load on or off. This solves the issue of having to install switch wiring which has been a problem ever since the invention of the lamp.
2. The key fob switch is portable and can be used from a maximum of 160m outdoors or 30m indoors. There is no longer a need to install back boxes, make holes or channel out for switch lines in the wall if you use our wireless switch.

Switch Technical Parameters

1. **Work Type:** Push Button
2. **Power Source:** Micro Energy Acquisition and self-powered
3. **Communication Model:** FSK
4. **Work Frequency:** 433Hz
5. **Number of Keys:** 1 (1 gang)
6. **Life Time:** 200,000 times on/off
7. **Outer Dimensions:** L48 x W28mm x h15.5mm
8. **Weight:** 25g
9. **Work Environment Temperature:** -30 C ~ 55 C
10. **Control Distance:** 80m (outdoor) / 25m (indoor)
11. **Control Method:** Pairing with ENER-J Wireless Controller
