

# DC To DC Converter 12V DC Output

**Product Code:** ZB15-\*\*-12S-A2**Stock Qty:**

## Product Description

DC To DC converter that allows LED lights that require a constant 12V DC supply to be powered from a battery. Depending on what level the battery is charged to the output voltage fluctuates from around 9 to 15 volts DC. This converter takes the fluctuating input voltage and delivers a true constant 12V DC supply to the connecting equipment.

If you connect constant voltage LED lights directly to a battery you are likely to reduce the life expectancy of them due to over voltage. One of these DC converters can be used with multiple LED lights, for example 1 DC converter can power up to 5, 3 watt LED lights.

Unlike other DC to DC converters on the market this one is encapsulated to prevent dust and insects from getting inside. Now available in two input voltage types of 9-18V DC or 18-36V DC. The 18-36V DC version can allow you to power 12V LED lights from a 24V supply! Further information can be located in the downloads tab.

### Key Features

- Wattage: 15 watt
- Current: 1250ma
- High efficiency: 87%
- Screw terminals
- CE marked and UL listed
- Has 4 fixing holes for surface mounting
- Optional output voltages o: f9-18V DC or 18-36V DC
- Guarantee: 3 years

## Product Specification
